

a Panel genes on the dopamine-neuron lineage axis

Down vs up genes: $P = 0.0006$ (Mann-Whitney)
vs genes equally changed in PD: $P = 0.0040$
shaded: outer 5% of all genes

b Overlap with subtype markers

c Pathway over-representation

Top four terms per list; dashed line: family-wise 5% threshold from random gene sets of the same size
