

Panel genes in the pathway

in PD lower in PD pathway, ringed by source; area = genes in it

Regulation of synapse pruning

Higher in PD (18 genes)
the panel: 1
40% of random lists return at least one (mean 2.8);
strongest term vs random lists: $P = 0.01$

Lower in PD (12 genes)
the panel: 0
62% of random lists return at least one (mean 6.8);
strongest term vs random lists: $P = 0.62$

All 30 panel genes
the panel: 4
32% of random lists return at least one (mean 1.5);
strongest term vs random lists: $P = 0.02$
